## About the app:

The app uses Opencv and Tkinter libraries in python to convert a normal image into a version where only edges are highlighted in the real image in black and white format.
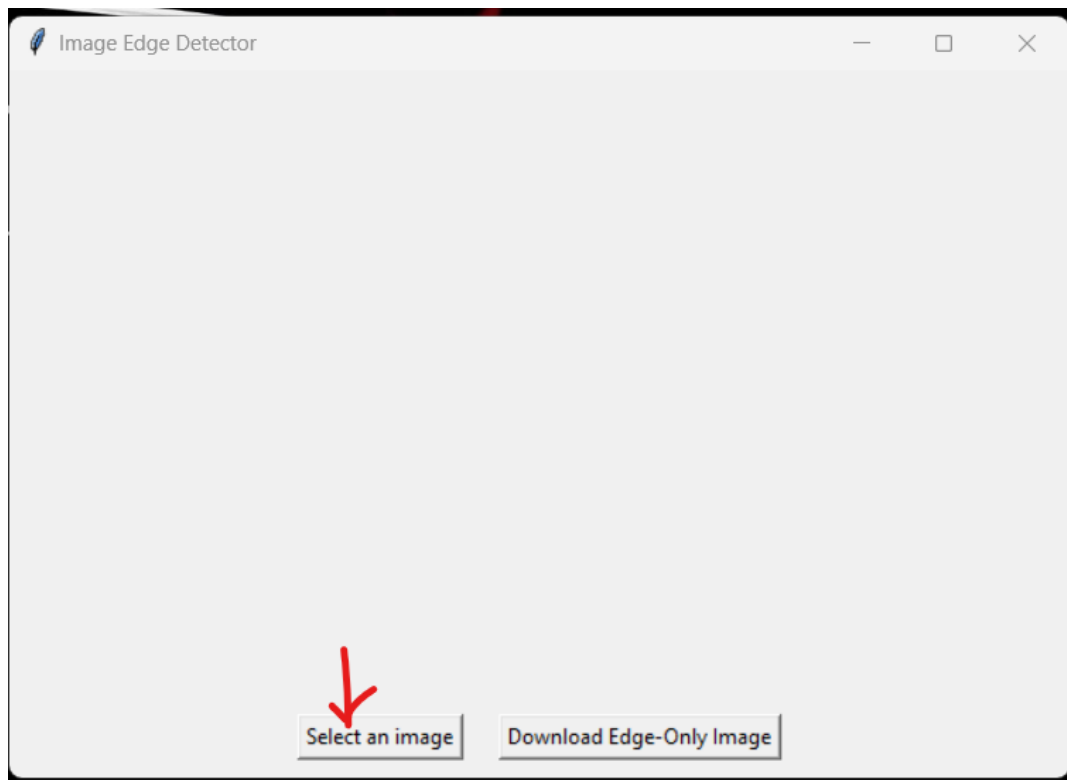

## Following is the steps to run the app:

1) open the app

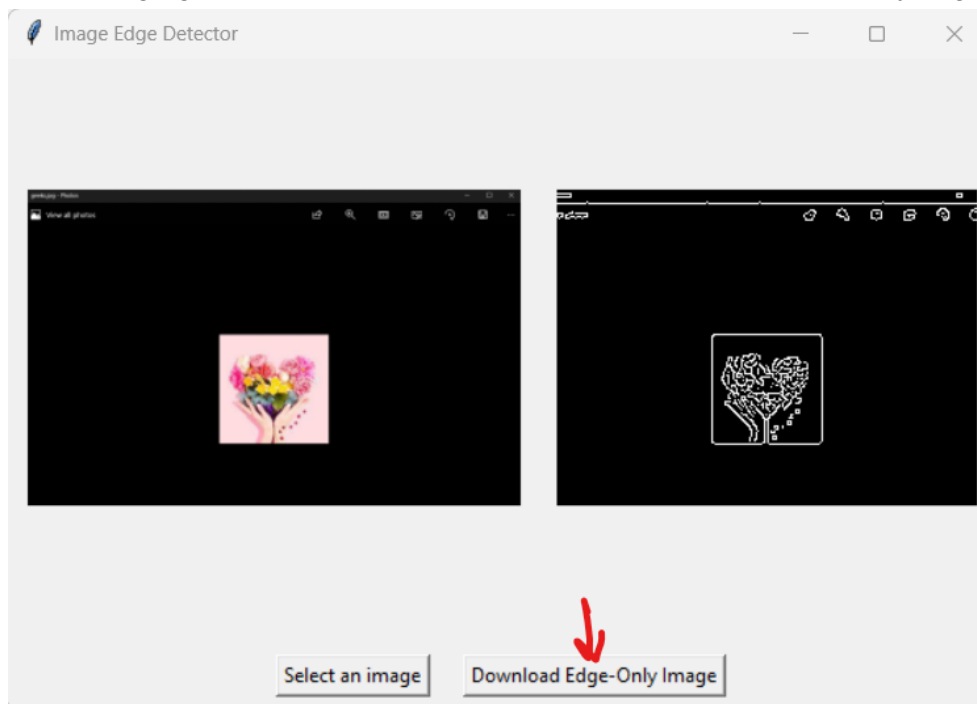

The app is in the 'testing' directory in my case.

2)Click on 'select image' when app opens

3)Select the image you want to convert to edge_only_version

4)The image gets converted into a black and white version where only edges are highlighted

You can now download the image

5)Now select the name of the image and its type and download

6)
The image gets saved in the saved folder as the app by default
